

Testable User Stories - Online Grocery Store Customer Portal

User Story 1: Customer Registration

As a new customer, I want to create an account so that I can use the online grocery store.

Test Case 1:

Given that a new customer is on the registration page, when they enter valid information and submit the form, then the system should create a new customer account.

Test Case 2:

Given that a customer enters an email that already exists, when they submit the registration form, then the system should display an error message.

User Story 2: Customer Login

As a registered customer, I want to log in so that I can access my shopping cart and order history.

Test Case 1:

Given that a customer has a valid account, when they enter the correct email and password, then the system should log them in.

Test Case 2:

Given that a customer enters an incorrect password, when they try to log in, then the system should display an error message.

User Story 3: Add Delivery Address

As a customer, I want to add a delivery address so that I can choose where my grocery order should be delivered.

Test Case 1:

Given that a customer is logged in, when they enter a valid address and save it, then the system should store the address with their account.

Test Case 2:

Given that a customer leaves required address fields blank, when they submit the address form, then the system should display a validation message.

User Story 4: Browse Products

As a customer, I want to browse grocery items so that I can see what products are available for purchase.

Test Case 1:

Given that a customer opens the product catalog page, when products exist in the database, then the system should display product names, prices, pictures, and availability.

User Story 5: Search Products

As a customer, I want to search for products by item name or description so that I can find specific grocery items quickly.

Test Case 1:

Given that a customer enters a product keyword in the search bar, when matching products exist, then the system should display only matching products.

Test Case 2:

Given that no products match the search keyword, when the customer searches, then the system should display a message saying no products were found.

User Story 6: Sort Products by Price

As a customer, I want to sort grocery items by price so that I can compare cheaper and more expensive items.

Test Case 1:

Given that a customer is viewing the product catalog, when they choose to sort by price from low to high, then the system should display products in ascending price order.

Test Case 2:

Given that a customer is viewing the product catalog, when they choose to sort by price from high to low, then the system should display products in descending price order.

User Story 7: Sort Products by Availability

As a customer, I want to sort grocery items by availability so that I can easily see which items are currently in stock.

Test Case 1:

Given that the product catalog contains available and unavailable items, when the customer sorts by availability, then available items should be displayed before unavailable items.

User Story 8: Add Item to Cart

As a customer, I want to add grocery items to my cart so that I can prepare an order.

Test Case 1:

Given that a customer is viewing an available product, when they click “Add to Cart,” then the product should be added to their shopping cart.

Test Case 2:

Given that a product is unavailable, when a customer tries to add it to the cart, then the system should prevent the item from being added.

User Story 9: View Shopping Cart

As a customer, I want to view my shopping cart so that I can review the items I plan to buy.

Test Case 1:

Given that a customer has added items to the cart, when they open the cart page, then the system should display each item’s name, price, quantity, and subtotal.

User Story 10: Delete Item from Cart

As a customer, I want to remove items from my cart so that I can change my order before checkout.

Test Case 1:

Given that a customer has an item in their cart, when they click the remove button, then the system should delete the item from the cart.

User Story 11: Apply Discount Code

As a customer, I want to apply a discount code so that I can reduce the total cost of my order.

Test Case 1:

Given that a customer enters a valid discount code, when they apply the code during checkout, then the system should reduce the order total.

Test Case 2:

Given that a customer enters an invalid discount code, when they apply the code, then the system should display an invalid code message and keep the original total.

User Story 12: Calculate Tax

As a customer, I want the system to calculate sales tax so that I can see the correct final order total.

Test Case 1:

Given that a customer has items in the cart, when they proceed to checkout, then the system should calculate tax using an 8.25% tax rate.

User Story 13: Choose Delivery Option

As a customer, I want to choose a delivery option so that I can decide how I want to receive my groceries.

Test Case 1:

Given that a customer is on the checkout page, when they select a delivery option, then the system should include that option in the order summary.

User Story 14: Place Order

As a customer, I want to place my grocery order so that I can complete my purchase.

Test Case 1:

Given that a customer has items in their cart and has selected a delivery option, when they click "Place Order," then the system should create an order and clear the shopping cart.

Test Case 2:

Given that a customer has an empty cart, when they try to place an order, then the system should prevent checkout and display an error message.

User Story 15: View Order History

As a customer, I want to view my order history so that I can see my previous grocery purchases.

Test Case 1:

Given that a customer has placed previous orders, when they open the order history page, then the system should display their past orders.

User Story 16: Sort Order History

As a customer, I want to sort my order history by order date or order amount so that I can review my purchases more easily.

Test Case 1:

Given that a customer has multiple past orders, when they sort by order date, then the system should display the orders in date order.

Test Case 2:

Given that a customer has multiple past orders, when they sort by order total, then the system should display the orders by dollar amount.
